Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 April 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 11,12,14, and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Tolles(US 6,623,341).

Regarding claim 11: Tolles teaches a substrate polishing apparatus. Wherein the system comprises a polishing platen 22rotatable at between about 10 rpm and about 100 rpm; and a polishing head to hold a semiconductor wafer and urge the wafer against the polishing pad 100 at down force pressure of between about 0.05 psi and about 4.5 psi. See col. 9 lines 18-20.

Regarding claim 12: The system of Tolles further comprises a dispenser to hold an abrasive slurry and dispense the slurry onto the polishing pad, see col. 8 lines 28-30.

Regarding claim 14: The polishing head of Tolles is rotatable according to col. 5 lines 63 and 64.

Regarding claim 15: The system of Tolles is inherently capable of removing total material of less than 500 Angstroms. Additionally, the amount of material removed is a matter of an intended and is not given patentable weight. The inclusion of material or article worked upon by a structure does not impart patentability to the claims. *In re*

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tolles et al in view of Donohue et al (US 6,312,319).

The teachings of Tolles et al were discussed above.

Tolles et al fails to teach a conditioner as claimed in claim 13 of the present invention.

Donohue et al teaches a CMP apparatus in which a rotating brush with bristles mounted on a pellet, see col. 16 lines 1-18.

The motivation to combine the teachings of Tolles et al and Donohue et al are that this conditioner ensures the cleanliness of the polishing result by cleaning the pad and provide more texture to the pad for cleaning as discussed in col. 16 lines 1-18 of Donohue et al.

Thus, it would have been obvious for one of ordinary skill in the art at the time of the claimed invention to combine the teachings of Tolles et al and Donohue et al.
